Re: Erosion and Sediment Control Plan – SCP#25-027– EGYPT ROAD SOLAR SUBSTATION

Dear Sirs and Madams:

Your plans for controlling erosion and sediment during the development of the above referenced project meet the requirements of the 2011 Maryland Standards and Specifications for Sediment and Erosion Control and Dorchester Soil Conservation District. As you are aware, disturbances of 1 acre or more require a Notice of Intent (NOI) be filed with the Maryland Department of the Environment. Erosion and sediment control approval is effective for three years following the approval date. Please obtain a grading permit from the Department of Public Works and all other required approvals, prior to construction. Another consideration is the identification of wetlands. If there are hydric (wet) soils, seasonal ponding, and/or potential wetlands in the area to be disturbed or developed, you may need approval from the Maryland Department of the Environment and/or the U.S. Corps of Engineers. Please refer to the Dorchester County Soil Survey for general soil information.

The proper installation of erosion and sediment control practices is essential for water quality protection. Daily inspection and maintenance of all practices is required until contributing drainage areas are stabilized. If you, the developer or contractors have questions regarding any aspect of erosion and sediment control, please contact me, at 443-225-7374.

Sincerely,

Karen Houtman
District Manager
