Driver Record Monitoring (DBM) Integration Guide

Introduction

The Driver Batch Monitoring (DBM) service, facilitated by Tyler Maryland, provides methods to securely monitor and receive driver record updates for a list of monitored drivers from the Maryland Department of Transportation Maryland Motor Vehicle Administration (MDOT MVA).

To be approved to use this service, users must be authorized within the scope of the Federal Driver Privacy Protection Act (DPPA) and approved by the MDOT MVA. Approved customers can enroll and manage a list of drivers to be monitored and receive updates when violation information changes for a monitored driver.

Changes in this document:

 - Revision to Restriction Codes – page 37

DBM REST API Service Overview

The Driver Batch Monitoring (DBM) REST API Service provides a secure, automated method of exchanging requests and data related to driver license monitoring. This method follows the industry standard for secure requests and transmission of driver record requests. This API permits customers to perform the following through secure integration:

- Submit Add, delete, or edit monitored driver licenses.
- Receive annual driver license records and driver record updates, alerts, and errors.

The DBM web service utilizes HTTPS transport encryption to protect the exchange of information between the customer and the server. The customer passes their username and password as parameters in each service call to the DBM service for the purpose of authentication.

Once subscribed to the REST API service, the customer uses API integration methods indicating drivers to be monitored. Each night, the system inspects the monitored drivers and provides results back to the customer containing either change records for the monitored driver records or the complete record depending on preferences established during enrollment. The results are sent daily, weekly, or monthly, depending on customer preferences established during enrollment.

Customers can submit an “Add/Change/Delete” request on weekdays. Customer IDs submitted with an “Add” indicator will return a complete driving record that will be produced overnight. Customer IDs submitted with a “Delete” indicator will be removed from monitoring for that customer.

Note: Customers who have already established Customer IDs for monitoring through the MDOT MVA will not need to resubmit the license numbers.

New Customer IDs added will be matched against the MDOT MVA’s records based on key fields: Driver License Number, Maryland ID, FEIN and Date of Birth. Records that do not match these keys will be rejected and the customer will receive an error response for that Customer ID.

Drivers will be processed Monday through Friday, nightly between the hours of 6:00 PM ET and 7:00 AM ET. Any actions sent via the interface after 6:00 PM ET will be processed the following business day. As with the existing MDOT MVA system, this system may be unavailable to process search requests during maintenance windows. Once processed, confirmation emails will be sent to customers advising records are ready to retrieve.

Maintenance Windows

Current maintenance windows where the application may not be available include:

- Nightly: 12:00am – 12:30 AM EST
- Sunday: 6:00am – 11:00 AM EST
- The second Saturday of every month from 11:00pm until 5:00 AM EST
- Tuesday and Thursday 5:00 PM EST

Program Guidelines

Driver Monitoring Submissions

DBM Add/Change/Delete submissions must occur no later than 6:00 P.M. EST any Monday – Friday, excluding Federal and State holidays. Initial Complete Records will be processed Tuesday – Saturday and will be available after 7:00am EST. Updates to driver data will occur based on customer preference and account settings. Only Maryland issued Customer IDs may be accessed.

Violation Codes

Violation codes included in the DBM program are related to suspensions, withdrawals, cancellations, revocations, restrictions and moving violations. In the event MDOT MVA creates, deletes, or modifies a violation code, updated records will be produced. If a subscriber has opted to receive 3-year/complete records, ALL driving record entries (within the rolling 3-year time span (or complete, if applicable)) will appear in the resulting record regardless of whether the violation codes are included in the DBM monitoring program or not. If a subscriber opts to receive partial record updates (a.k.a. driving-record entry updates), only those entries attached to a violation code included in the DBM program will be sent to the customer.

Charges and Billing

A 36-month (3-year) driving record, a complete driving record, and a Probation Before Judgment (PBJ) record produced via DBM are each considered non-certified copies and for non-government entities, and, as such, bear a cost of \$12.00/record. A driving record entry update or a PBJ record entry update is considered a partial record update and is priced accordingly at \$0.08/record. There are no minimum fees. Invoices are generated and mailed/e-mailed to customers at the beginning of each month for the previous month's transactions. Payment is due upon receipt of the monthly invoice. Interruption to service occurs if payment is not received by Tyler Maryland within 20 days of the date of the invoice. If payment is received following a termination, Tyler Maryland determines eligibility for reinstatement.

Anniversary Date for Monitored Drivers

When a new Customer ID is added to the monitoring program, the Customer ID enrollment date is considered the anniversary date for that monitored driver. For all Customer IDs enrolled prior to May 21, 2019, the company enrollment date into the MDOT MVA program will remain the anniversary date.

Upon receipt of a new Customer ID submitted for monitoring, the system will return a complete driving record. Subsequently, on the enrollment anniversary date of each Customer ID, the Driver's License Number, Maryland ID and/or FEIN(s) being monitored will cause the generation of a complete driving record.

Driver Record Types and Frequency

Record Type	Description	Frequency
Complete	Contains full history for the driver as well as any PBJ or MedCert information available.	Upon enrollment and anniversary date
36-month (3-year)	Contains 3-year history of driver data	Upon enrollment and anniversary date
Probation Before Judgement (PBJ)(Partial)	Updates to any Probation Before Judgement information added to the driver record	Daily, weekly, monthly (depending on customer setup preference)
Medical Certification (Partial)	Updates to any Medical Certification information added to the driver record	Daily, weekly, monthly (depending on customer setup preference)

DBM Program Support

To report a technical problem, error message, or billing inquiries, please call the Tyler Maryland Help Desk at (888) 4MD-HELP, or via email at mdhelp@tylertech.com and explain the nature of the problem. The support staff will request information from you and will work with you to resolve the issue.

Discontinuing Participation in the DBM Program

Customers who no longer wish to participate in the DBM program must notify Tyler Maryland, in writing, of their intentions to discontinue participation. The contract may be discontinued by either party with a thirty (30) day notice in writing.

Endpoints

Production: REST API is located at: <https://egov.maryland.gov/mva/dbm/rest/v1/FunctionName>
Test: REST API is located at <https://stage.egov.maryland.gov/mva/dbm/rest/v1/FunctionName>

Note:

The test environment will return only fictitious driver and vehicle records. Customers will not be charged for transactions conducted against the test system. Customers will need to contact Tyler Maryland's Technical Support team for credentials to access the test environment.

The test and production DBM systems will be maintained in a manner that ensures consistency between the service interfaces. Accordingly, integration code developed against the test system will function correctly when pointed towards the production service endpoint address.

HTTPS Method

Authentication

Basic authentication is used over HTTPS, within each request header in accordance with RFC 7235 (<https://httpwg.org/specs/rfc7235.html>). Unauthenticated or unauthorized users will return: Status Code **409 (Not Authorized)**. The DBM integration only allows for the HTTPS POST method. Other methods will return a **405 (Method Not Allowed)**.

HTTPS Request Format

All requests are required to be formatted as JSON. For example, {"CompanyCode": "0123M"}. This is controlled via the Content-Type request header.

Request Body Format:

- JSON: application/json; charset=utf-8

The following HTTP Request Header parameters are required and/or highly encouraged:

Parameter	Description	Req?	Example
Authorization	Basic [base64 content]	Yes	
Accept-Encoding	gzip, deflate	No	
Content-Type	JSON format	No	Application/ json; charset=utf=8
Accept	Application/json	No	

Table 1: HTTP Request Headers

HTTPS Service Standard Response and Error Codes

JSON is the utilized response type due to its smaller content length and broad acceptance. It is also the default type if the request received does not have the **Accept** header.

Response Body Format:

- **JSON:** application/json; charset=utf-8

The below table lists the HTTP Status codes returned from the API service and possible causes:

Status Code	Description	Causes / Reasons
200	Ok	
400	Bad Request	<ul style="list-style-type: none">• Request validation failed• Missing or invalid JSON property or value• See ValidationErrors parameter
401	Unauthorized	<ul style="list-style-type: none">• Invalid or missing Authorization header• Invalid UserName or Password
404	Not Found	<ul style="list-style-type: none">• Content-Length = 0: The request attempted to connect to an invalid address or resource.• Content-Length > 0: The REST API method did not find any items requested by the method.
405	Method Not Allowed	The request method was not a POST
500	Internal Server Error	An unexpected error occurred on the server

Table 2: HTTPStatus codes

Submitting Records

The DBM web service interface consists of 3 service methods which are used to manage the roster of monitored Customer IDs. A submission can consist of one or more of the submission types to administer a driver enrollment in the program. Submission types are outlined below and examples of each are in the below submission examples.

Table 3

Functionality Name	Description	Function Name
Submit Input File (Legacy)	Allows legacy customers to quickly transition to the REST API using the same file layout as previously offered. This may be deprecated in a future release. It is strongly encouraged to migrate to the new "Submit" method below.	Submitinputfile
Submit driver additions, changes, and deletions.	A singular function to submit multiple drivers to be managed. It accepts an array of drivers and includes a submission type to be performed on each driver.	Submit
Cancel Submission	Cancels any prior Add, Change, or Delete request submitted, per driver. This is used to rollback any driver submitted in error before it is processed by MDOT MVA.	CancelSubmissions

Please note the submission *type* indicates the action to be taken for the Driver Record. 'SubmissionType' in the XML tag indicates whether to apply an Add, Delete or Change to the monitored record.

All requests must contain the Company Code provided by MDOT MVA. If your organization has multiple Company Codes, drivers will only be submitted with the company code you provide. If an incorrect Company Code is provided or doesn't reconcile with a specified driver, the response will contain an error code.

Below are the formats, fields, and explanations of those fields to use when performing these activities.

Note:

- Missing, blank or invalid Company Code will return HTTP Status Code **400 (Bad Request)**
- If this function is called multiple times prior to processing, current driver lists waiting to be processed by MDOT MVA will be overwritten.
- Any new entries will be added to the list of drivers pending to be processed by MDOT MVA.
- Drivers submitted after the daily cut-off time will be processed and delivered the next business day.
- To cancel a submission, use [CancelChanges](#) API method (see below for example). Canceling is not available after MDOT MVA starts processing the driver.

Submission Types

Submission Types and examples of each function format are provided below. A submission may contain multiple submission types for the same company. Each submission type is expected to contain the company code and then list the Customer IDs and actions to be taken.

Submission Type	Description
Add	Allows one or more driver licenses to be added for monitoring
Change	Utilized when converting a driver license to now be CDL or to no longer be CDL. Also used to enable or disable receiving of annual records.
Delete	Customer IDs submitted with a "Delete" indicator will be removed from monitoring

*Submission examples and types are provided below.

SubmitInputFile

Test Location: <https://stage.egov.maryland.gov/mva/dbm/rest/v1/submitinputfile>

Location: <https://egov.maryland.gov/mva/dbm/rest/v1/submitinputfile>

Allows legacy customers to quickly transition to the REST API using the same file layout as previously offered. This may be deprecated in a future release. It is strongly encouraged to migrate to the new "Submit" method below.

SubmitInputFile Request Example:

```

Submit

Stage Location: <https://stage.egov.maryland.gov/mva/dbm/rest/v1/submit>

Location: <https://egov.maryland.gov/mva/dbm/rest/v1/submit>

A singular function to upload multiple drivers to be monitored. It accepts an array of drivers and includes a submission type to be performed on each driver.

Submit Request Example:

```
{
  "CompanyCode": "034M",
  "Drivers": [
    {
      "CustomerID": "C123456789001",
      "DateOfBirth": "1999-10-23T00:00:00",
      "MonitorAsCdl": true,
      "AnniversaryEnabled": true,
      "SubmissionType": "Change"
    },
    {
      "CustomerID": "C123456789003",
      "DateOfBirth": "1985-10-23T00:00:00",
      "MonitorAsCdl": true,
      "AnniversaryEnabled": true,
      "SubmissionType": "Delete"
    }
  ]
}
```

Table 8

Property Name	Data Type	Max Length	Description
CompanyCode	String	4	4-character code provided by MDOT MVA.
Drivers	Driver		An array of drivers you wish to submit to MDOT MVA.
Driver.CustomerID	String	13	DLN: 1 Letter followed by 12 numbers. MD ID: 2 letters followed by 11 numbers. FEIN: 9 numbers
Driver.DateOfBirth	DateTime (Formatted as String)	30	Recommend ISO-8601 format. Time and time zone information is ignored and only the date portion is used.
Driver.MonitorAsCdl	Boolean		Set this to true if this driver is to be monitored as CDL; otherwise set to false.
Driver.AnniversaryEnabled	String	1	Y = Yes N = No (Required for CDL)
Driver.SubmissionType	String	10	Submission Type to be performed on this driver. <ul style="list-style-type: none">• Add – Adds the driver to the list to be monitored.• Change – Toggles the MonitorAsCdl value from true to false or vice versa.• Delete – Removes the driver from your list to be monitored.

    }
  ]
}

```

Table 10

Property Name	Data Type	Description
FailCount	Integer	Number of submitted drivers that failed to save. Reasons will be provided for each driver.
SuccessCount	Integer	Number of submitted drivers that were saved successfully.
Warnings	String array	Lists drivers that were duplicated in your request. Each warning contains the license number and a list of zero-based locations of the duplicates. <i>Example:</i> "Warnings": ["Duplicate license number: C123456789002, Index locations: 0,3"],
ValidationErrors	String array	Lists each driver's reason for failing validation. Reasons may include missing fields and missing or invalid values.
ResponseData	Result array.	Lists the results of each driver's submission
Result.Index	Integer	Zero-based index of the submitted driver. Used by the Warnings section to identify the driver.
Result.CustomerID	String	The license number submitted.

Result.Success	Boolean	
Result.FailReason	String	Short description of the failure such as "Duplicate"
Result.Warning	String	Displays any warning associated with this driver. Normally blank.

CancelSubmissions

Stage Location: <https://stage.egov.maryland.gov/mva/dbm/rest/v1/CancelSubmissions>

Location: <https://egov.maryland.gov/mva/dbm/rest/v1/CancelSubmissions>

Cancels any prior Add, Change, or Delete request submitted, per driver. This is used to rollback any driver submitted in error before it is processed by MDOT MVA.

Table 11

Cancel Submissions Request Example:	
<pre>{ "CompanyCode": "034M", "Drivers": ["C123456789001", "C123456789003"] }</pre>	

Table 12

Property Name	Data Type	Max Length	Description
CompanyCode	String	4	4-character code provided by MDOT MVA.
Drivers	String array	13 char (each item)	An array of license numbers, Maryland IDs and/or FEINs you wish to cancel.

Table 14

Property Name	Data Type	Description
FailCount	Integer	Number of submitted drivers that fail to be saved. Reasons will be provided for each driver.
SuccessCount	Integer	Number of submitted drivers that were saved successfully.
Warnings	String array	Lists drivers that were duplicated in your request. Each warning contains the license number and contains a list of zero-based locations of the duplicates. For example, the License Number at index 0 is duplicated by indexes 3 and 8. <code>"Warnings": ["Duplicate license number: C12345678 9002, Index locations: 0,3,8"],</code>
ValidationErrors	String array	Lists each failed driver's reason for failing validation. Reasons may include missing or invalid fields and values.
ResponseData	Result array	Lists the results of each driver's submission
Result.Index	Integer	Zero-based index of the submitted driver. Used by the Warnings section to identify the driver.
Result.CustomerID	String	The license number, Maryland ID or FEIN submitted.
Result.Success	Boolean	
Result.FailReason	String	Short description of the failure such as "Duplicate"
Result.Warning	String	The operation was considered successful but has a warning that should be noted or fixed.

Validation Errors:

- An array or list of drivers is required.
- C1234567890xxx01: Driver's License Number must start with a letter and followed by 12 numbers. Maryland ID must start with MD followed by 11 numbers. FEIN is 9 numbers.

Warnings and Failures per Driver's license number:

Table 15

Description	Success	Warning or Failure
Nothing to cancel. This driver could not be found in our system.	True	Warning
Nothing to cancel. There is no pending change request for this driver.	True	Warning
A change request for this driver is already in progress by MDOT MVA.	False	Failure
Unexpected error trying to update this driver.	False	Failure

Driver Action Errors

Errors may occur when submitting drivers for monitoring. Below is a list of driver action submission errors. If you need assistance with an error received, please contact the Tyler Maryland Help Desk at mdhelp@tylertech.com or

(888) 9MD-EGOV and explain the nature of the problem. The support staff will request information from you and will work with you to resolve the issue.

Driver Action Errors

Description
Unexpected error trying to update this driver's license
This line is an exact duplicate and will not be processed
A change request for this driver's license is already in progress by MDOT MVA
Duplicate CustomerID: C123456789005, Index locations: N1, N2, N3,
Nothing to cancel. This driver could not be found in our system.
Nothing to cancel. There is no pending change request for this driver.

Validation Errors

Errors will occur when expectations are not met or correct for specific field values. Please see below for a list of validation errors that may occur when processing drivers for monitoring. If you need assistance with an error received, please contact the Tyler Maryland Help Desk at mdhelp@tylertech.com or (888) 9MD-EGOV and explain the nature of the problem. The support staff will request information from you and will work with you to resolve the issue.

Field Validation Errors

Parameter	Description
FileContents	File content is empty and will not be processed
FileContents	The length of each line must be 25 characters
File Contents	An array or list of drivers is required
Customer ID	Driver License Number must start with a letter and followed by 12 numbers, Maryland ID must start with MD followed by 11 numbers, FEIN must be 9 numbers
Customer ID	The Customer ID is a duplicate with conflicting values
Customer ID	The CustomerID property is missing or invalid
Date of Birth	DOB is invalid or missing
Date of Birth	DOB does not match the pattern YYYY-MM-DD
Date of Birth	DOB must be between 1900-01-01 and the current date
Submission Type	Invalid submission type
CDL Indicator	Invalid CDL Flag
CDL Indicator	The MonitorAsCdl property is required
Anniversary Indicator	The AnniversaryEnabled property is required.

Parameter	Description
Anniversary Indicator	Invalid Anniversary Enabled Flag
	A change request for this driver is already in progress by MDOT MVA
	Unexpected error trying to update this driver

ResponseData Status Descriptions:

Status	Description
Active	CustomerID is currently being monitored in the DBM program
Pending Addition	Waiting for MDOT MVA to process this addition. The customer is allowed to change or cancel this record up to the daily submission cutoff time.
Pending Change	Waiting for MDOT MVA to process this change. The customer is allowed to change or cancel this record up to the daily submission cutoff time.
Pending Deletion	Waiting for MDOT MVA to process this deletion. The customer is allowed to change or cancel this record up to the daily submission cutoff time.
Addition InProgress	The MDOT MVA has received and is in process of adding this driver. The customer cannot change or cancel this record.
Change InProgress	The MDOT MVA has received and is in process of changing this driver. The customer cannot change or cancel this record.
Deletion InProgress	The MDOT MVA has received and is in process of removing this driver. The customer cannot change or cancel this record.

Retrieving Monitored Driver Record Results

The DBM web service interface consists of two service methods which are used to retrieve monitored driver record updates.

- **Retrieve Latest Results:** Returns the latest set of results delivered by MDOT MVA
- **Retrieve Results by Date Range:** Retrieves a list of result files and contents within the given date range.

Below are the formats, fields and explanations of those fields to use when performing these activities.

Functionality	Description	Function Name
Retrieve Results by Date Range	Retrieves a list of result files and contents within the given date range. Only results received within 30 days are available.	RetrieveResultsByDateRange
Retrieve Latest Results	Returns the latest set of results delivered by MDOT MVA	retrieveLatestResults

RetrieveResultsByDateRange

Stage Location: <https://stage.egov.maryland.gov/mva/dbm/rest/v1/RetrieveResultsByDateRange>

Location: <https://egov.maryland.gov/mva/dbm/rest/v1/RetrieveResultsByDateRange>

Retrieves a list of result files and contents within the given date range. Only results received within 30 days are available.

RetrieveResultsByDateRange Request Example:

```
{
  "CompanyCode": "034M",
  "StartDate": "2019-11-01T05:00:00",
  "EndDate": "2019-11-15T06:00:00"
}
```

Retrieve Results By Date Range Request Properties

Property Name	Data Type	Format	Max Value
StartDate	ISO 8601 DATE	YYYY-MM-DDThh:mmTZD	30 days prior to current date
End Date	ISO 8601 DATE	YYYY-MM-DDThh:mmTZD	Current date

```

Retrieve Results Response Properties

Parameter	Description	Data Type	Example
HttpStatus	200 = Success See Table 3 for Failure values	NUMERIC	"HttpStatus": 200
IsSuccess	True when the HttpStatus code is 200	BOOLEAN	"IsSuccess": true
FailureReason	Provides the reason for any failure	STRING	"FailureReason": ""
Warnings	Provides a list of warnings associated with the request. The response may still be successful. Warnings are typically associated with a single item in the request.	STRING ARRAY	"Warnings": ["Duplicate license number: C123456789002, Index locations: 0,3"]

Parameter	Description	Data Type	Example
ValidationErrors	Lists each validation failure. Validation failures of any kind will fail the entire request and will return an HttpStatus of 400 (Bad Request). All validation errors must be corrected before the request is fulfilled.	STRING ARRAY	ValidationErrors": []
ResponseData	Contains the result of the request. This property may return an array of results.	File Information Array	ResponseData[]

Table 22: Retrieve Results response properties

Retrieve Results ResponseData Properties

Property Name	Description	Data Type	Format
FileName	Filename with MDOT MVA Company Code	STRING	See FileNames and Appendix A
Description	Describes the purpose or contents of the file	STRING	See FileNames and Appendix A
DeliveredDate	Date and time the file was delivered	ISO 8601 DATE	YYYY-MM-DDTHH:MM:SS
Contents	The actual contents of the driving record in plain text.	STRING	Varies Except for error records, the content will be a JSON string representation of the record.

RetrieveLatestResults

Stage Location: <https://stage.egov.maryland.gov/mva/dbm/rest/v1/RetrieveLatestResults>

Location: <https://egov.maryland.gov/mva/dbm/rest/v1/RetrieveLatestResults>

Returns results identical as ResultsByDateRange except it behaves like the following:

- Searches the previous 5 calendar days for results. Use RetrieveResultsByDateRange if files older than 5 days are needed.
- Retrieves results for records received within the last 5 calendar days.
- Example: Assume today is the 10th of the month. If you received files on the 7th and the 8th we will only return files received on the 8th.

RetrieveLatestResults Request Example:

```
{ "CompanyCode": "034M" }
```

DBM Result Records and Files

Filename:

Files delivered by MDOT MVA follow a naming pattern documented below. All filenames are suffixed with the customer's 4-character company code.

Filename Contains	File Description
LIS	Contains 3-year or complete records.
PBJ	Related to Probation Before Judgement and CDL Medical Certification information.
FTPS010B	Reports error information about the driver being monitored (may be blank). Daily, Weekly, Monthly Error files are deprecated.
ANN	Anniversary files. Complete records are delivered each year on the date a driver is enrolled to be monitored.
2-digit numbers	MDOT MVA's flag to indicate how often a driver's record is searched for updates and/or delivered. 10 = Once (Initial files) 30, 35 = Daily 40, 45 = Weekly (Saturday and Sunday) 50, 55 = Monthly (Last Saturday of the month)

Filename Examples:

Initial Records (Initial 3-year Record Run for ALL new Driver Licenses added):

3-Year / Complete Records:

OUT-FTPLIS10-XXXX

OUT-FTPLIS10 = Initial 3-Year/Complete Record

XXXX = Company Code

Example: OUT-FTPLIS10-001L

Error File:

OUT-FTPS010B-XXXX

OUT-FTPS010B = Error Records

XXXX = Company Code

Example: OUT-FTPS010B-001L

Initial Complete PBJ Records

OUT- PBJLIS10-XXXX

OUT-PBJLIS10 = Initial 3-Year/Complete PBJ Records

XXXX = Company Code

Example: OUT-FTPS010B-001L

3-Year / Complete Records

3-Year / Complete Records:

OUT-FTPLISYY-XXXX

OUT-FTPLIS = 3-Year/Complete Record

YY = Subscriber Frequency (30-Daily; 40-Weekly; or 50-Monthly)

XXXX = Company Code

Example: OUT-FTPLIS30-001L (Daily Update Subscriber)

PBJ Complete Records

3-Year / Complete Records:

OUT-PBJLISYY-XXXX

OUT-PBJLIS = Probation Before Judgment Record

YY = Subscriber Frequency (35-Daily; 45-Weekly; or 55-Monthly)

XXXX = Company Code

Example: OUT-PBJLIS30-001L (Daily Update Subscriber)

Individual Update Driving Records (Partial Records)

Driving Record Line Entry Records:

OUT-FTPRPAYY-XXXX

OUT-FTPRPA = Driving Record Updates

YY = Subscriber Frequency (30-Daily; 40-Weekly; or 50-Monthly)

XXXX = Company Code

Example: OUT-FTPRPA30-001L (Daily Update Subscriber)

Individual Update PBJ Records (Partial PBJ Records)

PBJ Record Line Entry Records:

OUT-PBJRPAAY-XXXX

OUT-PBJRPA = Probation Before Judgment Record Updates

YY = Subscriber Frequency (35-Daily; 45-Weekly; or 55-Monthly)

XXXX = Company Code

Example: OUT-PBJRPA30-001L (Daily Update Subscriber)

File Contents and Layout:

Files within the same family but different schedule or frequency have the same layout. All files are now formatted as JSON data. The exception is the Initial Error file (OUT-FTPS010B-XXXX) due to its unique situation of providing error status of drivers submitted for addition, changes, or deletion. Index files and daily, weekly, and monthly error files are deprecated.

Full Record Files (Non-PBJ):

Record files are now formatted as JSON data.
